Leroy:

Based upon our conversation, you will get the following information:

- 1. The wastewater tanks where we need to address sludge and an estimate of the amount of sludge;**
- 2. Liquids need to be removed from T-7;**
- 3. Daniel needs to pull sludge judge sample from NT8 to see how much sludge/liquid remains in tank. Hopefully, it the remainder can go Lonestar.**
- 4. Wastewater Tank PT4 should be hazcatted so we can determine if we can just add them to one of our frac tanks. If so, we need to go ahead and do it;**
- 5. When we begin the wastewater tank sludge removal we need to open the manways on all tanks even those without sludge and leave the manways off. We also need to make sure all the valves remain open after removing all liquids and solids;**
- 6. Need to open all flanges on all the piping on the wastewater tanks and make sure there are no materials remaining (don't necessarily need to pressure wash clean - talk to me about what you observe);**
- 7. Need to open all flanges on all piping on the North and South Tank farms and make sure there are no materials remaining (don't necessarily need to pressure wash clean - talk to me about what you observe);**

Thanks

Gary Moore
